

ABSOLUTE DIESEL FILTRATION FOR MINING

NJORD APS-3000 Performance
with filtration controller

THE NEED FOR ABSOLUTE FUEL POLISHING SYSTEMS

As engine performance and reliability on mines are critical, it is strongly recommended to not only filter when transferring fuel to the day tanks or engines, but to **recirculate** all bulk tanks through an Absolute Polishing System, with a **high flow rate**, **every week**.

NJORD PERFORMANCE LINE KEY FEATURES:

- + High flow rate to lift water and sediments effectively off tank bottom
- + Stop micro-organism growth
- + Very clean, compact, totally modular design
- + Recirculate fuel and transfer between all tanks
- + High performance water separation and filtration with world-wide filter element availability (Separ, Racor, Cimtek absolute)
- + General alarm and leak alarm output to another PLC

Bulk tank and hi-flo filtration containers

We offer the complete range of products and systems for fuel delivery at the mine, bulk tank filtration, filling of fuel trucks, on board bypass filtration for mining vehicles, on-board inline filtration to the engines as well as mobile tank cleaning systems

Mobile Tank Cleaner

On-board filtration

Fuel Maintenance Program

Injector cleaner

On-board Fuel Conditioners

Bulk Tank Filtration

**MAXIMUM PROTECTION
AND PERFORMANCE**
